Weekly Report 29 June 2026

SET Index fell slightly and closed at 1542 on Friday. This week, we forecast the market will likely trade sideways within 1540 – 1570 region. Sinking beneath 1540 support will drive down to test 1515 as our next support. The USD/THB exchange rate edged higher and settled at 33.30 level on Friday. This week, we foresee the exchange rate will begin to correct and trade lower within 33.00 – 33.40 region.

Gold spot prices dipped beneath USD4000 /oz last week and quickly rebound to close at USD4089 /oz on Friday. This week, we outlook the yellow metal will make a jump in short-covering trend. Range is expected to trade within USD4000 – USD4250 /oz as new interest is set to re-enter market.

Crude WTI spot prices fell last week due to a ceasefire in Strait of Hormuz. Market settled at USD70.90 /barrel before the weekend. Due to a new military conflict on Friday late session, we forecast the Crude prices might open and jump high on coming Monday. Range is target to trade largely from USD70.00 – USD90.00 /barrel region.

Silver spot prices weakened last week and closed at USD59.18 /oz on Friday. This week, we are optimistic the market will follow yellow metal and trade higher. Range is aimed at USD55.00 – USD65.00 /oz region in growing demand. July month is a season to target recovery in commodity prices.
